SAP S/4HANA – QUALITY MANAGEMENT (QM)

Complete End-to-End Professional Training Syllabus

Ambattur, Chennai

Course Objective

A complete end-to-end SAP S/4HANA Quality Management curriculum covering QM architecture, master data, quality planning, inspection planning, procurement inspections, production/in-process inspections, sales and delivery inspections, stock/warehouse quality processes, results recording, defects, usage decisions, quality notifications, certificates, quality costs, analytics, configuration, integration, implementation and production support.

SAP's current S/4HANA QM learning journey covers quality management in procurement, production, sales and distribution, storage, quality planning, inspection, quality certificates, quality improvement and analytics. SAP's implementation learning also includes sample determination, dynamic modification, master inspection characteristics, inspection plans, result recording, valuation, usage decisions, quality notifications and QM costs.

■cite■turn0search2■turn0search0■

1. SAP S/4HANA Quality Management Overview

- QM role within S/4HANA
- Quality planning, inspection, control/improvement and analytics
- Inspection lot lifecycle
- Quality management in procure-to-pay, plan-to-produce and order-to-cash
- QM organizational responsibilities
- Fiori-based QM overview
- Integration architecture with MM, PP, SD, EWM/WM and CO

2. QM Organizational Structure & Configuration Foundation

- Company code and plant relationship
- Plant and storage locations
- QM-specific organizational settings
- Inspection types and inspection lot origins
- QM control parameters
- Number ranges and status management
- QM catalogs and code groups
- Work centers and inspection locations

3. QM Material Master & Inspection Setup

- QM views in material master
- Inspection type activation
- Inspection setup
- QM procurement controls
- QM production controls
- QM sales/delivery controls
- Batch management considerations
- Quality certificates and control indicators

4. QM Basic Master Data

- Master Inspection Characteristics (MIC)
- Qualitative and quantitative characteristics
- Inspection methods
- Sampling procedures
- Sampling schemes
- Catalogs, code groups and selected sets
- Defect codes
- Valuation modes
- Dynamic modification rules
- Quality planning master-data relationships

5. Inspection Plans

- Inspection plan structure
- Plan header
- Operations
- Inspection characteristics
- Work centers
- Production resources/tools
- Material assignment
- Supplier/customer-specific plans
- Plan usage and status
- Task list groups and group counters
- Lot-size dependent plan selection
- Inspection plan maintenance and troubleshooting

6. Sampling & Dynamic Modification

- Sampling concepts
- Fixed, percentage and other sampling approaches
- Sampling procedures
- Sampling schemes
- Sample determination
- Dynamic modification of inspection scope
- Inspection stages
- Skip inspection concepts
- Long-term quality-level evaluation
- Configuration and real-time examples

7. Procurement / Goods Receipt Quality Inspection

- Purchase order to goods receipt inspection
- Inspection lot creation
- Inspection type for goods receipt
- Automatic inspection lot creation
- Inspection stock
- Sample determination
- Results recording
- Defects recording
- Usage decision
- Stock posting from quality inspection
- Vendor quality evaluation overview

8. Production & In-Process Quality Inspection

- Production-order integration
- In-process inspection
- Inspection lot creation during production
- Inspection characteristics in routing
- Inspection characteristics in master recipe
- Goods receipt inspection for production
- Results recording during production
- Defects and nonconformance
- Usage decision
- Integration with production order confirmation
- Quality-related production controls

9. Sales & Outbound Delivery Inspection

- Quality inspection during outbound delivery
- Goods issue inspection
- Inspection lot creation for delivery
- Results recording
- Defect recording
- Usage decision before goods issue
- Rejected inspection handling
- Batch-level inspection
- Quality certificate creation
- SD-QM integration troubleshooting

10. Quality Inspection in Storage / Warehouse Processes

- Inspection during stock movements
- Warehouse and QM integration
- Quality inspection stock
- Stock transfer inspection
- Inspection during handling-unit/warehouse processes overview
- EWM/WM integration considerations
- Posting changes
- Blocked/unrestricted/quality stock management

11. Inspection Lot Management

- Inspection lot creation
- Inspection lot origins
- Inspection lot statuses
- Inspection lot selection
- Inspection lot processing
- Inspection lot completion

- Inspection lot closure
- Partial lots and sample management
- Inspection lot troubleshooting

12. Results Recording

- Record quantitative results
- Record qualitative results
- Single and summarized recording
- Result valuation
- Specification limits
- Tolerance limits
- Automatic valuation
- Manual valuation
- Defect creation during results recording
- Results recording with Fiori applications
- Results recording troubleshooting

13. Defects & Nonconformance Management

- Defect recording
- Defect codes and code groups
- Defect locations
- Defect causes
- Defect activities
- Defect catalogs
- Corrective and preventive actions
- Linking defects with quality notifications
- Trend analysis and recurrence management

14. Usage Decision & Stock Posting

- Usage decision concept
- Positive/negative decisions
- Partial acceptance
- Stock posting proposals
- Unrestricted, blocked and scrap postings
- Return to vendor scenarios
- Rework decisions
- Usage decision prerequisites
- Automatic versus manual decisions
- UD troubleshooting

15. Quality Notifications

- Quality notification concept
- Customer complaints
- Supplier complaints
- Internal quality notifications
- Defect recording
- Causes and tasks
- Activities and actions
- Partner functions
- Notification workflow
- Status management
- Closure and follow-up
- Quality notification reporting

16. Quality Improvement / CAPA

- Corrective actions
- Preventive actions
- Root-cause analysis
- 8D concept overview
- Task assignment
- Action tracking
- Effectiveness checks
- Continuous improvement
- Linking notifications and quality activities

17. Quality Certificates

- Quality certificate overview
- Incoming supplier certificates
- Certificate receipt confirmation
- Certificate profiles
- Certificate content and layout
- Material/customer certificate assignment
- Outbound quality certificates
- Batch and inspection-result data in certificates
- Certificate output and reprint
- Certificate troubleshooting

18. Quality Costs & QM Orders

- QM cost concepts
- QM orders
- Inspection costs
- Activity/time confirmation

- Cost collection
- Quality notification costs
- Cost analysis
- CO integration
- Cost optimization and reporting

19. Vendor / Supplier Quality Management

- Supplier quality inspection
- Incoming certificate requirements
- Supplier defect notifications
- Vendor quality evaluation overview
- Supplier-specific inspection plans
- Quality history
- Supplier complaint process
- Procurement-QM integration

20. Customer Quality & Complaint Management

- Customer complaints
- Sales/delivery quality inspection
- Customer-specific specifications
- Quality certificates
- Defect and notification processing
- Corrective action
- Customer quality history
- SD-QM integration

21. QM Integration with MM

- Purchase order and goods receipt
- Inspection stock
- Material movements
- Vendor returns
- Batch management
- Certificate receipt
- Stock posting through usage decision
- MM-QM troubleshooting

22. QM Integration with PP

- Production order
- In-process inspection
- Goods receipt inspection
- Routing/master recipe integration

- Inspection characteristics
- Production confirmation
- Rework and scrap
- PP-QM troubleshooting

23. QM Integration with SD

- Sales order and delivery
- Outbound inspection
- Customer-specific quality requirements
- Quality certificates
- Goods issue dependency
- Customer complaint process
- SD-QM troubleshooting

24. QM Integration with EWM/WM

- Quality stock and warehouse movements
- Inspection stock handling
- Warehouse task considerations
- Goods receipt and putaway interaction
- Picking and delivery inspection
- Posting changes
- EWM-QM integration overview

25. QM Integration with CO & Finance

- Quality costs
- QM order settlement concepts
- Activity costing
- Scrap and loss considerations
- Cost center integration
- Period-end quality cost analysis

26. QM Analytics & Reporting

- Inspection lot reporting
- Results analysis
- Defect analysis
- Quality notification reporting
- Supplier quality analysis
- Customer complaint analysis
- Quality certificates reporting
- Quality KPI concepts
- Fiori analytical applications

- Quality trend and Pareto analysis

27. QM Configuration – SPRO / IMG Curriculum

- Basic QM settings
- Inspection types
- Inspection lot origins
- Catalogs and code groups
- Selected sets
- Master inspection characteristic control indicators
- Sampling procedures
- Dynamic modification
- Inspection plan settings
- Results recording and valuation
- Usage decision configuration
- Quality notification configuration
- Certificate profiles
- QM work centers
- Number ranges and status profiles
- Integration settings with MM, PP, SD, EWM and CO

28. QM Fiori Applications & User Experience

- Fiori QM overview
- Manage Inspection Lots
- Manage Inspection Plans
- Record Inspection Results
- Make Usage Decision
- Manage Quality Notifications
- Quality certificate applications
- Analytical quality apps
- Business roles and authorizations overview
- Fiori troubleshooting

29. QM Testing & Implementation Methodology

- Requirement gathering
- Business process mapping
- Fit-gap analysis
- QM configuration workbook
- Master-data templates
- Unit testing
- Integration testing
- User acceptance testing

- Defect management
- Cutover planning
- Go-live readiness
- Hypercare support

30. Production Support & Troubleshooting

- Inspection lot not created
- Wrong inspection type
- Inspection plan not selected
- MIC/result recording issue
- Sample determination failure
- Usage decision blocked
- Stock posting error
- Certificate issue
- Quality notification workflow issue
- Integration errors with MM/PP/SD/EWM
- Authorization/Fiori issues
- Performance and data issues
- Root-cause analysis and incident documentation

31. Real-Time E2E Projects

- Project 1: Purchase order → GR → inspection lot → results → UD → stock posting
- Project 2: Supplier certificate → GR → certificate receipt → inspection → UD
- Project 3: Production order → in-process inspection → results → confirmation → GR
- Project 4: Outbound delivery → quality inspection → UD → quality certificate → PGI
- Project 5: Customer complaint → quality notification → defect → corrective action → closure
- Project 6: Supplier complaint → notification → root cause → corrective action
- Project 7: Inspection plan with MIC, sampling and dynamic modification
- Project 8: EWM/warehouse quality inspection scenario
- Project 9: Quality-cost analysis and QM order scenario
- Project 10: Complete implementation and production-support case

32. Interview & Certification Preparation

- QM configuration questions
- Inspection-lot lifecycle questions
- MM-QM integration scenarios
- PP-QM integration scenarios
- SD-QM integration scenarios
- Inspection planning and sampling scenarios
- Results recording and usage decision cases
- Quality notification and CAPA cases

- Certificate scenarios
- Production-support cases
- Mock interviews and practical assessment

Recommended Training Roadmap

Phase	Coverage	Outcome
1	QM Foundation & Master Data	Understand QM architecture, inspection types and master data
2	Quality Planning	Build MICs, sampling, catalogs and inspection plans
3	Quality Inspection	Execute procurement, production, delivery and stock inspections
4	Quality Control	Results, defects, usage decisions and stock postings
5	Quality Improvement	Notifications, CAPA, supplier/customer complaints
6	Certificates & Costs	Certificates, QM orders and quality-cost processes
7	Integration & Configuration	MM, PP, SD, EWM, CO and SPRO configuration
8	Implementation & Support	Testing, go-live, troubleshooting and real-time projects

SAP Reference Alignment

SAP's current S/4HANA QM curriculum covers procurement, production, sales and distribution, storage processes, quality planning, inspection, quality certificates, quality improvement and analytics. SAP's implementation curriculum also explicitly covers sample determination, dynamic modification, master inspection characteristics, inspection plans, results recording, valuation, usage decisions, quality notifications and QM costs. ■cite■turn0search2■turn0search0■turn0search8■
