

TECHBIG SOLUTIONS

SAP ECC – Warehouse Management (LE-WM)

Complete Professional Training Syllabus

Location: Ambattur, Chennai

Focus: Functional configuration • Business processes • Integration • Production support • Hands-on practice

Course Objective

This syllabus is designed to take learners from SAP WM fundamentals through configuration, master data, warehouse execution, inventory, integration, monitoring and production-support scenarios in SAP ECC/ERP Logistics Execution Warehouse Management.

The curriculum emphasizes the classic SAP LE-WM concepts of warehouse structure, storage bins, quants, transfer requirements, transfer orders, putaway, picking, physical inventory and integration with MM, SD and PP.

Recommended audience: SAP MM/WM consultants, warehouse/process professionals, support consultants, freshers with SAP fundamentals, and users moving into SAP WM implementation/support.

1. Introduction to SAP ECC Warehouse Management

- Overview of SAP ERP Central Component and Logistics Execution (LE)
- Purpose and scope of SAP LE-WM; warehouse-level inventory management
- WM versus Inventory Management (MM-IM); integration concept
- Warehouse process overview: goods receipt, putaway, internal movement, picking and goods issue
- Warehouse documents and process flow
- Important terminology: warehouse number, storage type, storage section, storage bin, quant, storage unit, transfer requirement and transfer order
- Lean WM versus full WM overview

2. Organizational Structure and Warehouse Structure

- Define and assign warehouse number
- Storage types: purpose, control parameters and examples
- Storage sections and section indicators
- Storage bins: coordinates, bin types, capacity and bin master data
- Picking areas and activity areas
- Storage unit management concepts
- Interim storage types and interim storage bins
- Warehouse structure design for high-rack, bulk, fixed-bin and open-storage scenarios
- Mapping plant and storage location to warehouse number

3. WM Master Data

- Material master requirements for WM
- WM views and warehouse-specific material data
- Storage bin master data
- Quant concept and stock identification
- Storage unit types and packaging-related considerations
- Batch management and batch characteristics in warehouse processes
- Special stock considerations
- Cycle counting / inventory-related master data

4. Transfer Requirements (TR)

- Purpose and lifecycle of Transfer Requirements
- Create TR manually
- Automatic TR creation from Inventory Management and other processes
- TR number ranges
- TR creation for specific storage types/materials
- Display, change, process and monitor TRs
- Convert TR to Transfer Order

- Background processing and operational considerations

5. Posting Change Notices (PCN)

- Posting change concept in WM
- Creation and processing of Posting Change Notices
- Examples: quality inspection to unrestricted stock, blocked to unrestricted
- Posting change with and without physical movement
- Conversion of PCN to Transfer Order
- Monitoring and troubleshooting posting changes

6. Transfer Orders (TO) – Core Execution

- Transfer Order purpose and document structure
- TO number ranges and movement types
- Create TO with reference to TR
- Create TO with reference to PCN
- Create TO with reference to material document
- Create TO with reference to inbound/outbound delivery
- TO creation without a source object where applicable
- Background TO creation
- Confirm TO; partial and difference confirmation
- Cancel/reverse TO
- Print and reprint TO
- TO monitoring and warehouse activity tracking
- Source and destination storage bins; return storage bins

7. Warehouse Movement Types and Control

- WM movement types and reference movement types
- Assign reference movement types
- Movement-type-dependent control
- Goods receipt, goods issue, transfer and internal movement scenarios
- Interim storage types for GR/GI
- Negative stock controls where applicable
- Automatic TO creation settings
- Relationship between IM movement types and WM movement types

8. Putaway Strategies

- Putaway process and determination logic
- Next empty bin strategy
- Fixed bin strategy
- Addition to existing stock

- Open storage
- Bulk storage concepts
- Storage unit type-based putaway
- Capacity checks and capacity control
- Section search and storage type search
- Putaway with mixed and partial quantities
- Troubleshooting failed destination-bin determination

9. Stock Removal / Picking Strategies

- Stock removal process
- FIFO
- LIFO
- Stringent FIFO
- Expiration/shelf-life-related selection
- Fixed-bin picking
- Removal by quantity and stock category
- Batch determination considerations
- Storage type search and search sequence
- Troubleshooting source-bin determination

10. Goods Receipt Processes

- GR with inbound delivery
- GR without inbound delivery
- Purchase order and MM integration
- Goods receipt into interim storage type
- Putaway after GR
- Partial receipt and difference handling
- Quality inspection stock and WM interface
- Blocked stock and posting changes
- GR monitoring and error handling

11. Goods Issue and Outbound Delivery

- Outbound delivery and WM integration
- Picking requirement and TO creation
- Pick confirmation
- Partial picking and short pick
- Staging and goods issue area
- Goods issue posting
- Picking status and delivery status

- Reversal/cancellation scenarios
- Common outbound errors and troubleshooting

12. Internal Warehouse Movements

- Bin-to-bin transfer
- Storage type to storage type transfer
- Stock transfer within warehouse
- Transfer posting between stock categories
- Material-to-material transfer where applicable
- Replenishment of fixed bins
- Ad hoc internal movements
- Monitoring internal transfer orders

13. Replenishment

- Purpose and business use of replenishment
- Fixed-bin replenishment
- Planning and execution concepts
- Minimum/maximum stock levels
- TO creation for replenishment
- Monitoring replenishment exceptions

14. Physical Inventory in WM

- WM physical inventory process
- Create inventory records
- Count storage bins and stock
- Enter count results
- Difference analysis
- Clear differences in WM
- Clear differences in IM
- Recount and zero-count scenarios
- Inventory methods and controls
- Physical inventory troubleshooting

15. Batch Management and Shelf-Life Processes

- Batch-managed materials in WM
- Batch selection and stock removal
- Batch determination overview
- Shelf-life expiration considerations
- FEFO-related business requirements and design considerations
- Integration with MM and SD batch processes

16. Special Warehouse Processes

- Storage Unit Management
- Handling storage units and SU numbers
- Two-step picking overview
- Wave picking overview
- Multiple picking processes
- Cross-docking concept and applicability in classic WM
- Value-added services overview
- Special stock and special movement scenarios

17. Integration with SAP MM

- MM-IM and WM integration architecture
- Purchase order → GR → WM putaway
- Goods receipt movement types and WM interface
- Transfer posting and posting changes
- Stock transfers and storage-location movements
- Stock overview and WM stock reconciliation
- Troubleshooting MM-WM integration errors

18. Integration with SAP SD

- Sales order → outbound delivery → picking → PGI
- Delivery relevance for WM
- Picking status and WM status flow
- Partial delivery and partial picking
- Picking confirmation and goods issue
- Returns and reversal scenarios
- SD-WM integration troubleshooting

19. Integration with SAP PP

- Production supply and staging concepts
- Goods issue to production
- Material staging and warehouse movements
- Goods receipt from production
- Production storage locations
- WM integration considerations for PP/PI environments

20. RF / Mobile Data Entry Overview

- Purpose of RF in warehouse execution
- RF-enabled warehouse processes
- Typical RF transactions and confirmation concepts

- Device/user setup overview
- Error handling and support considerations

21. Warehouse Monitoring and Reporting

- Warehouse stock monitoring
- Open Transfer Requirements
- Open Transfer Orders
- TO confirmation monitoring
- Warehouse activity and stock reports
- Bin and quant analysis
- Stock differences and exception monitoring
- Delivery and warehouse document status monitoring
- Operational KPIs for warehouse support

22. SAP WM Configuration / SPRO Curriculum

- Enterprise structure and warehouse assignments
- Warehouse number configuration
- Storage types and storage sections
- Storage bin configuration and number ranges
- Interim storage areas
- Movement types and reference movement types
- Transfer requirement control
- Transfer order control
- Automatic TO creation
- Putaway control and strategies
- Stock removal control and strategies
- Storage unit management
- Physical inventory configuration
- Print/control settings
- Integration settings with MM, SD and PP
- Testing configuration in a controlled client

23. Production Support and Troubleshooting

- Analyze failed warehouse documents
- TR/TO creation errors
- Unable to determine source/destination bin
- Stock mismatch between IM and WM
- Negative stock and interim storage issues
- Unconfirmed transfer orders

- Delivery/picking status inconsistencies
- Posting change errors
- Batch and shelf-life selection issues
- Physical inventory differences
- Root-cause analysis and incident documentation
- Transport/change management basics
- Functional specification and test evidence

24. End-to-End Business Scenarios – Hands-on

- Scenario A: Purchase order → GR → TR/TO → putaway → confirmation
- Scenario B: Inbound delivery → GR → putaway
- Scenario C: Sales order → outbound delivery → picking → TO confirmation → PGI
- Scenario D: Internal bin-to-bin movement
- Scenario E: Replenishment of fixed picking bins
- Scenario F: Stock transfer between warehouse areas
- Scenario G: Quality/blocked stock posting change
- Scenario H: Physical inventory and difference clearing
- Scenario I: Batch-managed material picking
- Scenario J: Production staging and goods issue
- Scenario K: Troubleshoot a failed TO/bin determination process

25. Interview and Certification Preparation

- Core SAP WM concepts and terminology
- Configuration-based interview questions
- Real-time scenario questions
- MM-WM integration questions
- SD-WM integration questions
- PP-WM integration questions
- Production-support case studies
- End-to-end process explanation practice
- Mock interviews and practical assessments

Recommended Training Structure

Stage	Coverage	Recommended focus
1	Foundation	WM concepts, terminology, warehouse structure
2	Core execution	TR, PCN, TO, putaway, picking
3	Business processes	GR, GI, internal movements, replenishment
4	Integration	MM, SD, PP and delivery integration
5	Advanced operations	SU management, batch, physical inventory, RF overview
6	Configuration	SPRO configuration and process controls
7	Support	Monitoring, troubleshooting, testing and real-time cases
8	Assessment	Hands-on project, interview preparation and mock scenarios

Important Technology Note

This syllabus is specifically framed for classic SAP ECC/ERP LE-WM. SAP states that classic LE-WM was a compatibility-pack capability in S/4HANA and was replaced by Stock Room Management for supported S/4HANA scenarios; therefore, this course should not be treated as an S/4HANA EWM syllabus.

Reference basis: SAP's ECC WM training documentation covers warehouse-management structural elements, MM-IM/WM integration, movement types, transfer orders, putaway and stock-removal control. SAP Help also defines the Transfer Order as the execution document for warehouse movements such as picking, putaway, posting changes and inventory.
